

## Braille displays that also meet your future challenges

The flexible and easily adaptable VarioPro Braille display is developed with the frequently changing workplace and higher education settings in mind. VarioPro2 is equipped with 80 braille cells and innovative, thumb operated roll bars that provide the user with uninterrupted reading and provide quicker orientation to the information that appears on the computer screen. New job functions can be added, leading to needed changes in the work environment. VarioPro2 can grow with a person's skills and expertise in all such situations.

- Innovative concept
- Flexible and ready for the future
- Maximum user comfort and high workflow-efficiency
- High-quality finish and reliable technology

VarioPro2 is equipped with innovative roll-bars on the front side of the display that can be operated by your thumbs. These roll-bars allow blind users to navigate the computer screen without interruption. VarioPro2 has four roll-bars that perform scrolling and other key functions. Operation of the braille display as a whole is simplified, and orientation to the computer screen is faster.

The high-quality and elegant finish of VarioPro's housing, made from anodized aluminium is very thin, stable and sturdy. Our many years of experience in the development and manufacture of professional braille displays, combined with the use of the latest technology, helps ensure that our products are very reliable, and extremely long lasting. VarioPro provides exceptional levels of functionality for use in the workplace, or in higher education settings.
